Argos / Acme Payments / Fictional one-page preview

30.98

WEIGHTED RISK / 100

Moderate

69.44

CONFIDENCE / 100

RISK LEVEL

Sample recommendation: approve with controls

Moderate weighted risk driven by payment data access, incomplete security assurance, and missing price benchmark.

What the packet makes visible

Evidence gaps	Owner / required action
Security questionnaire and SOC 2 or equivalent	Security / collect assurance before production access
DPA and breach-notification terms	Legal / resolve before contract signature
Unbenchmarked price	Procurement / compare at least two alternatives before signature

Five proposed controls. Three pending approvals.

Business owner, security and legal approval are all pending. The complete sample includes nine evidence-linked domain scores, the evidence register, control owners, deadlines and negotiation points.

Human review owns the outcome

Argos provides a structured review packet. The customer retains procurement approval. This fictional example uses only placeholder evidence and demonstrates the format, not completed diligence.
